### Pre-Procedural Considerations

Pre-existing infections (known or suspected) – if present, use appropriate treatment regimen instead of prophylactic regimen for procedure. Doses should be scheduled to allow for re-dosing just prior to procedure.

### Prophylaxis Regimen

<table>
<thead>
<tr>
<th>Clinical Situation</th>
<th>First line regimen</th>
<th>Alternative (Immediate type or severe penicillin or cephalosporin hypersensitivity)</th>
</tr>
</thead>

### MRSA Colonisation

Percutaneous procedures in patients with a history of MRSA colonisation or infection

ADD Vancomycin 1g IV infused over 100 minutes before procedure (1.5g IV for patients > 80 kg infused over 150 minutes)

### *Vancomycin Alternative*

Patients with insufficient time to complete vancomycin infusion prior to procedure

**USE**

Teicoplanin 800mg IV (single dose only) bolus over 5 minutes before procedure (1200mg IV for patients > 100 kg)
