

Is your family protected from measles?

Measles can be very dangerous, and can lead to pneumonia, brain inflammation and other serious illness.

Make sure your family's measles vaccinations are up to date. To be fully protected you should have two recorded doses of Measles, Mumps, Rubella (MMR) vaccine. If you're not sure if you've already had the vaccine, please get it again.

See your GP or visit a free drop-in clinic.

Visit a free drop-in clinic—no appointment necessary
